Reduce data complexity and management costs with Computacenter and IBM

To derive the greatest value from your data, it needs to be managed effectively. For data to support decision-making, analytics, automation and AI, organisations need an in-depth understanding of the data they have and where it's held. Computacenter and IBM help organisations gain greater visibility of their data and simplify management so they can maximise efficiency, minimise costs and unlock their data's potential.

Customer drivers

Data volumes are growing exponentially and with IT environments often widely distributed, data could be held on-premise, in a co-location data center, containerised or in the cloud.
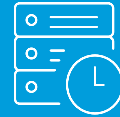

Organisations must keep their data under control in order to maximise its value and remain compliant with an increasingly complex regulatory landscape.

Computacenter and IBM solution

Computacenter and IBM help organisations ensure their data is available, consistent and compliant – wherever it resides.

We help organisations establish robust data governance frameworks and stewardship practices so they can manage data more efficiently while safeguarding compliance.

Streamline data management

- Increase efficiency and reduce costs
- Enhance data quality and searchability
- Improve governance and simplify compliance
- Get more value from business data

Computacenter and IBM's strategic data services include:

Data Needs Assessment

This six- to eight-week programme includes technology reviews, workshops and interviews with key stakeholders to help you understand your data.

Following analysis, we'll provide insights and recommendations on data use cases, process improvements and technology investments so you can align your data with your organisations strategy.
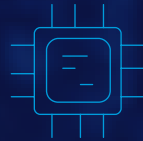

Data Management

We help organisations establish data lifecycle management tools and processes that improve control, enhance efficiency and reduce costs.

Using advanced analytics from IBM watsonx™, we can improve the searchability and quality of your data, so it's readily available for your data-driven initiatives.

Data Governance and Compliance

With a combination of proven processes and IBM watsonx™ governance tools, we help organisations simplify compliance monitoring and automate tasks, so you can always keep ahead of regulatory requirements.

Discover more

With Computacenter and IBM, organisations can reduce the complexity and costs of data management and gain a greater understanding of their data, enabling them to put it to better use.

To find out how you can simplify data management and unlock more value from your data with Computacenter and IBM, contact your Computacenter Account Manager, call **01707 631000** or email **enquiries@computacenter.com**
