

MOBILISE, CONNECT AND SECURE YOUR WORKFORCE

FIVE WAYS TO HELP MAXIMISE MOBILITY, PRODUCTIVITY AND SECURITY

Home. Office. Client site. Collaboration hub. Café. Today's employees work from anywhere and everywhere. Empowering them with technologies that enable them to work effectively in any location is vital to gain a competitive advantage. Increased mobility can not only improve employee productivity and satisfaction, but also contributes to the agility and resilience that organisations need to thrive in unpredictable market conditions.

SAMSUNG

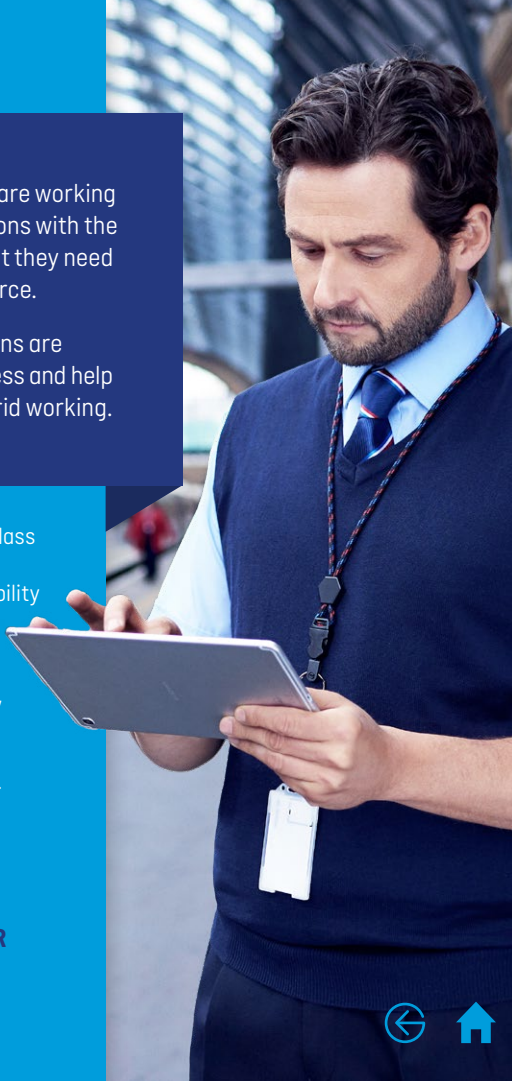

Computacenter and Samsung are working together to provide organisations with the devices, tools and services that they need to support their mobile workforce.

Samsung's mobile-first solutions are designed specifically for business and help address the challenges of hybrid working.

- Samsung devices are built with world-class components in Samsung-owned and operated factories, ensuring accountability and a seamless supply chain.
- As a world leader in smartphone, tablet, computing, silicon chips, DRAM memory, SSD storage, OLED screens, batteries and software, Samsung devices offer reliability, performance and innovation.
- In 2021, Samsung invested \$18.6 billion in research and development and is the biggest global patent owner.¹

HERE ARE FIVE WAYS WE CAN EMPOWER YOUR MOBILE WORKFORCE.

1

DELIVERING A GREAT EXPERIENCE

As organisations compete to attract and retain the skills they need, employee engagement is more important than ever before. With workplace technologies playing a vital part in the overall employee experience, providing workers with device choice and flexibility is key.

With Computacenter's user assessments and persona mapping helping to find the ideal technology match for every employee, and Samsung's range of appealing and intuitive devices, organisations can maximise user satisfaction. From lightweight laptops with the power of a PC, to Chromebooks able to withstand knocks and drops, Samsung has devices suitable for every role, executives and information workers to employees on the frontline. Computacenter also offers Samsung 2-in-1 devices that combine power, mobility and flexibility. With all-day battery life, rapid charging, 6E WIFI connectivity and cameras and microphones designed for video calling, employees can stay productive and connected.

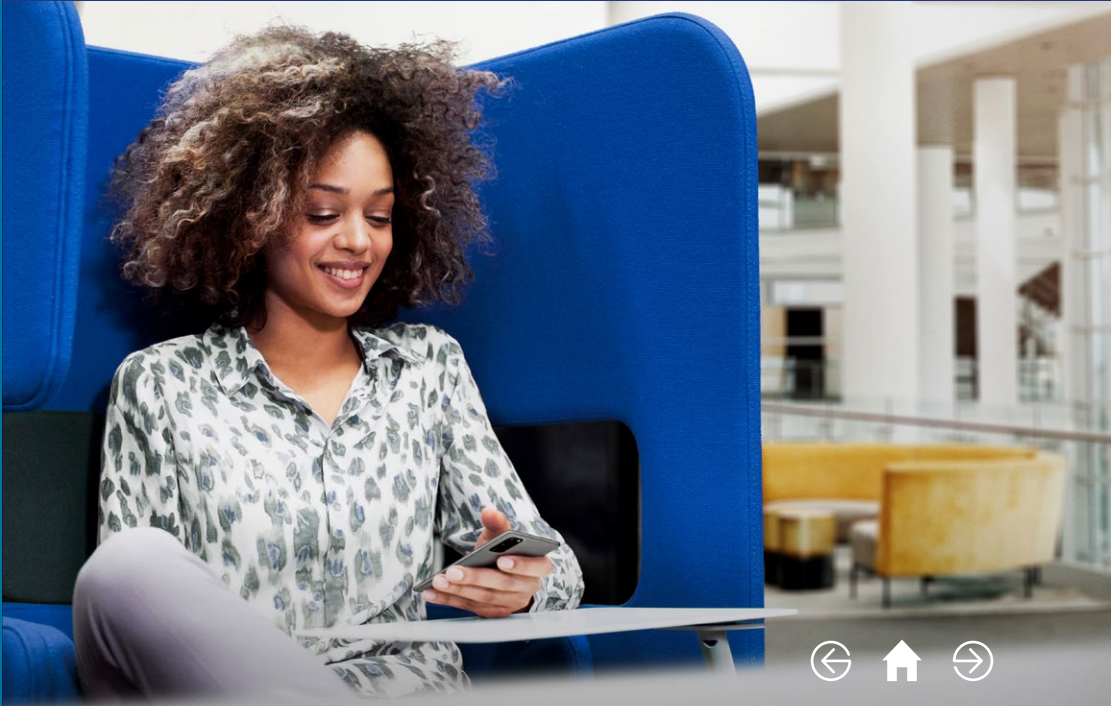

Employees that already use a Samsung mobile or tablet can leverage the interoperability of the Samsung ecosystem to enjoy even greater performance. With notifications across devices, the ability to access phone apps direct from their laptop and straightforward content sharing, users can work seamlessly.

2

REPURPOSING OFFICE SPACE FOR EASIER COLLABORATION

Whether your organisation is encouraging employees to return to the office more regularly or taking advantage of the home working revolution to free up real estate, most are finding that office space is no longer used in the same way. From hot desks to collaboration hubs, organisations need to offer solutions that enhance communication and enable disparate teams to work together.

Computacenter and Samsung help design and implement collaboration solutions that optimise workspaces, enhance productivity and make an impact. For example, Samsung's LED signage and video walls with 8K and Crystal UHD screens provide an immersive viewing experience on a large scale for lobbies, meeting rooms, entrances and conference rooms.

Employees that need enhanced displays on their desktop can view every detail with complete clarity with Samsung's ultra-wide curved displays. Our digital signage solutions make wayfinding and room reservations simple and highly visible. With the Samsung Flip, teams can develop new ideas seamlessly and share meeting notes while keeping confidential information secure. With comprehensive management of devices and content via an all-in-one solution, our display solutions are not only intuitive to use, but also easy to manage and maintain.

3

EMBRACING THE FUTURE OF DEVICE MANAGEMENT

In the world of hybrid work, delivering support services requires modern management. With a more disparate, varied and complex environment to support, IT management needs to be efficient to minimise the risk of downtime – from addressing issues and replacing faulty devices to onboarding new starters.

Computacenter and Samsung have established a more effective way of managing your laptop estate, with centralised remote management and automation that enables near zero-touch deployments. Computacenter's managed services combined with the capabilities of the Samsung Knox platform reduce the time and effort of delivering IT services to minimise cost.

Computacenter is the first UK reseller certified to provide maintenance and break-fix for Samsung devices, which means we can offer a single point of contact for advisory, sourcing, management and disposal services. Our breadth of capabilities across technologies and vendors means we can manage mixed estates with proven best practices. We offer remote delivery, rollout, support and management to keep employees productive, regardless of their location.

4

KEEPING PEOPLE AND DATA SECURE

Organisations need to ensure their corporate systems and data are secure, regardless of where their employees are working. With a disparate workforce, organisations can no longer rely on traditional perimeter-based security and have to rethink how they secure their devices and data.

Samsung technologies have enterprise-grade security built in from the chip up, including regular patches to address emerging threats, firewalls, secure boot, Windows BitLocker, Drive Encryption and file-level information-loss protection on every Windows device.

For greater security controls, organisations can leverage the Samsung Knox management platform. With Computacenter's consultative approach, we can advise on how best to utilise the comprehensive Samsung Knox toolset to create a secure environment that best fits your business and employee needs.

5

BOOSTING SUSTAINABILITY

From meeting net zero goals to reducing landfill, sustainability is now top of the corporate agenda as customers, employees and stakeholders all demand greater accountability.

Working with Computacenter and Samsung makes it easier for organisations to comply with environmental regulations, measure their impact and demonstrate their sustainability credentials.

Computacenter's specialist subsidiary RDC is the world's foremost IT circular services management company. We offer secure end-of-life services for IT assets, including deployment, remarketing and recycling, enabling organisations to maximise asset value while reducing landfill and providing complete traceability.

Samsung is also a leader in sustainability. Samsung Life Cycle Assessments consider potential environmental impacts across the entire lifecycle, including pre-manufacturing, product manufacturing, distribution, product use and disposal.

The company is ISO14040 series certified and builds the majority of its components itself, ensuring complete control over raw materials, quality control and shipping.

Samsung's 2022 solutions feature packaging made from up to 90 per cent recycled cardboard and incorporate ocean-bound recycled plastics. Samsung won Energy Star Partner of the Year Award for Environment Protection 2022 and all its 2022 devices are Energy Star 8.0 certified.²

The company's global commitment to sustainability includes 100 per cent renewable energy usage at all worksites in the US, Canada and China, and 4.54 million tonnes of e-waste collected since 2009 through programmes in 55 countries.

A STRATEGIC PARTNERSHIP

Computacenter and Samsung have more than 20 years of experience in working together at a strategic level

Computacenter was awarded Elite Partner of the Year at 2021 Samsung One Awards

Computacenter is the only reseller certified to provide Samsung warranty and break-fix services

With Computacenter and Samsung technologies, organisations can keep employees productive and secure, wherever they work from, while boosting sustainability and simplifying device management.
